**Improved Intelligent Noise Cancellation (ANC) // Smart Audio Tuning //
Completely redesigned charging case // Up to 24 hours of battery life //**

**Winner of: Red Dot of the Red Dot Design Award [2021] // Available now online
and in stores for 199 EUR in black and white**

Copenhagen, September 22nd 2021: Danish audio company Libratone today introduces the latest generation of its popular True Wireless in-ear headphones with improved intelligent noise cancellation. The Libratone AIR+ (2nd Gen) combines elegant Danish design with state-of-the-art audio technology and innovative features. The headphones stand for a rich, balanced sound with outstanding battery life. The practical and timeless charging case has been completely redesigned and can be charged wirelessly.

Active noise cancellation par excellence with innovative features

The new-generation Libratone AIR+ is designed for the urban lifestyle with enhanced noise cancellation (ANC). The hybrid ANC solution with separate digital ANC chipset delivers impressive performance with up to 30dB. As a result, users benefit from a significantly wider frequency range for more effective noise cancellation: background noise is suppressed better and more naturally, and the "ANC background noise" is also audibly quieter. CityMix[®] Smart automatically detects the environment and the activities of its users and adjusts the ANC level

LIBRATONE

to the individual circumstances (e.g. when running, walking, sitting, wind noise, telephone calls, etc.).

The dual-mic solution of the Libratone AIR+ allows users – as well as the person they are talking to – to benefit from excellent voice quality even during calls. It provides intelligent speech enhancement thanks to ambient noise detection, analyzing signals from both microphones and ensuring clear voice quality even in noisy environments.

Premium sound and voice quality with a stable connection at all times

The Libratone AIR+ does not compromise on sound quality neither: Two 5.3mm driver units combined with Qualcomm's flagship QCC5141 chipset ensure both powerful, balanced sound and a stable connection at all times. True Wireless Mirroring™ guarantees an even more reliable and stable pairing between the earphones and the audio source, while Bluetooth 5.2 and AptX Classic offer high-quality wireless transmission of music, podcasts, phone calls and more.

To ensure that the sound gets from the headphones into the ear with as little loss as possible, the fit test (available via the free Libratone smartphone app) helps one to choose the right ear tips with the best insulation. Even if none of the three included ear tips fit, Smart Audio Tuning detects wearing status and automatically adapts the sound to the ideal audio curve.

Iconic design with simplified operation

The charging case design of the Libratone AIR+ has been completely redesigned: compared to the previous version, it now features a rectangular form factor in high-quality material with rounded corners. The center of the charging case is adorned with the mockingbird, the familiar Libratone logo in a premium metal look. Three LEDs on the USB-C port provide an indication of the current charging status, which can be called up via the function button on the charging case. The charging case is not only an eye-catcher: The new format enables easier accessibility compared to other True Wireless headphone charging cases for a better and one-handed opening of the case with unique stowage of the earphones, which are inserted vertically. This also makes cleaning the charging ports easier. The headphones are IP54 certified, making them dust, sweat and splash resistant. Libratone AIR+ has been awarded the Red Dot of the Red Dot Design Award [2021].

LIBRATONE

Long-lasting battery with flexible charging options

The Libratone AIR+ guarantees up to 24 hours of music enjoyment at peak times – up to six hours in continuous operation as well as 18 hours of capacity via the charging case. The headphones are charged via the USB-C port. And the ANC headphones can also be powered wirelessly via the Qi wireless charging standard.

Personalized music enjoyment via app

Via the Libratone app – available free of charge for iOS and Android devices – users have a wide range of setting and personalization options. For example, different Libratone devices can be managed, the respective firmware can be updated and tap functions can be set up individually for each side of the headphones (play/pause, next/previous track, volume +/- etc.). Switching between devices, the quick change of the Bluetooth connection with the last three connected audio sources in range, can also be activated via the tap function settings. The Libratone app also includes the option for individual ANC settings, the ear tip fit test and the choice of different sound profiles.

Price and availability

The Libratone AIR+ is available now in black and white color at a price of EUR 199, exclusively from Amazon, Gravis, Cyberport and Elektro Enzinger.
